

Closed Loop Recycling

GREEN PRODUCTS FROM YOUR OWN **MIXED** PLASTIC WASTE

Plastic waste is a major problem in modern society with over 5 million tonnes of it being generated in the UK each year, and only 7% of it being recycled.

The problem is that in order to recycle plastic you need to know exactly what type it is, and for it to be clean and fully segregated.

In the real world this is very difficult to achieve. At Omnia we can process completely mixed plastic waste.

- **No segregation**
- **No separation**
- **No complication**

We manufacture our products directly from the mixed plastic waste stream giving our customers a completely closed loop recycling route. The end result is an extremely versatile material with similar properties of strength and ease of use as timber but being plastic it will not rot or degrade.

Our recycled plastic can be made into a diverse range of products from fenceposts to children's playgrounds, contact our innovations department to find out more.
